

MarkLogic in the Cloud Workshop

Unit 1 – Deployment of a Cluster

MARKLOGIC CLUSTER

Easy Deployment on Azure

- Parameterized deployment
- Interactive setup guidance
- Using Azure Solution Templates

Deployment Choice

Cluster Size

Single node cluster or
multiple nodes cluster.

License Option

Developer License or
Bring Your Own License

Resource Config

HA, Load Balancing,
Storage Type

MARKLOGIC CLUSTER

We will use...

Azure Load
Balancer

Network
Security
Group

Blob Storage

Resource
Group

Azure
Management
Portal

Azure Virtual
Network

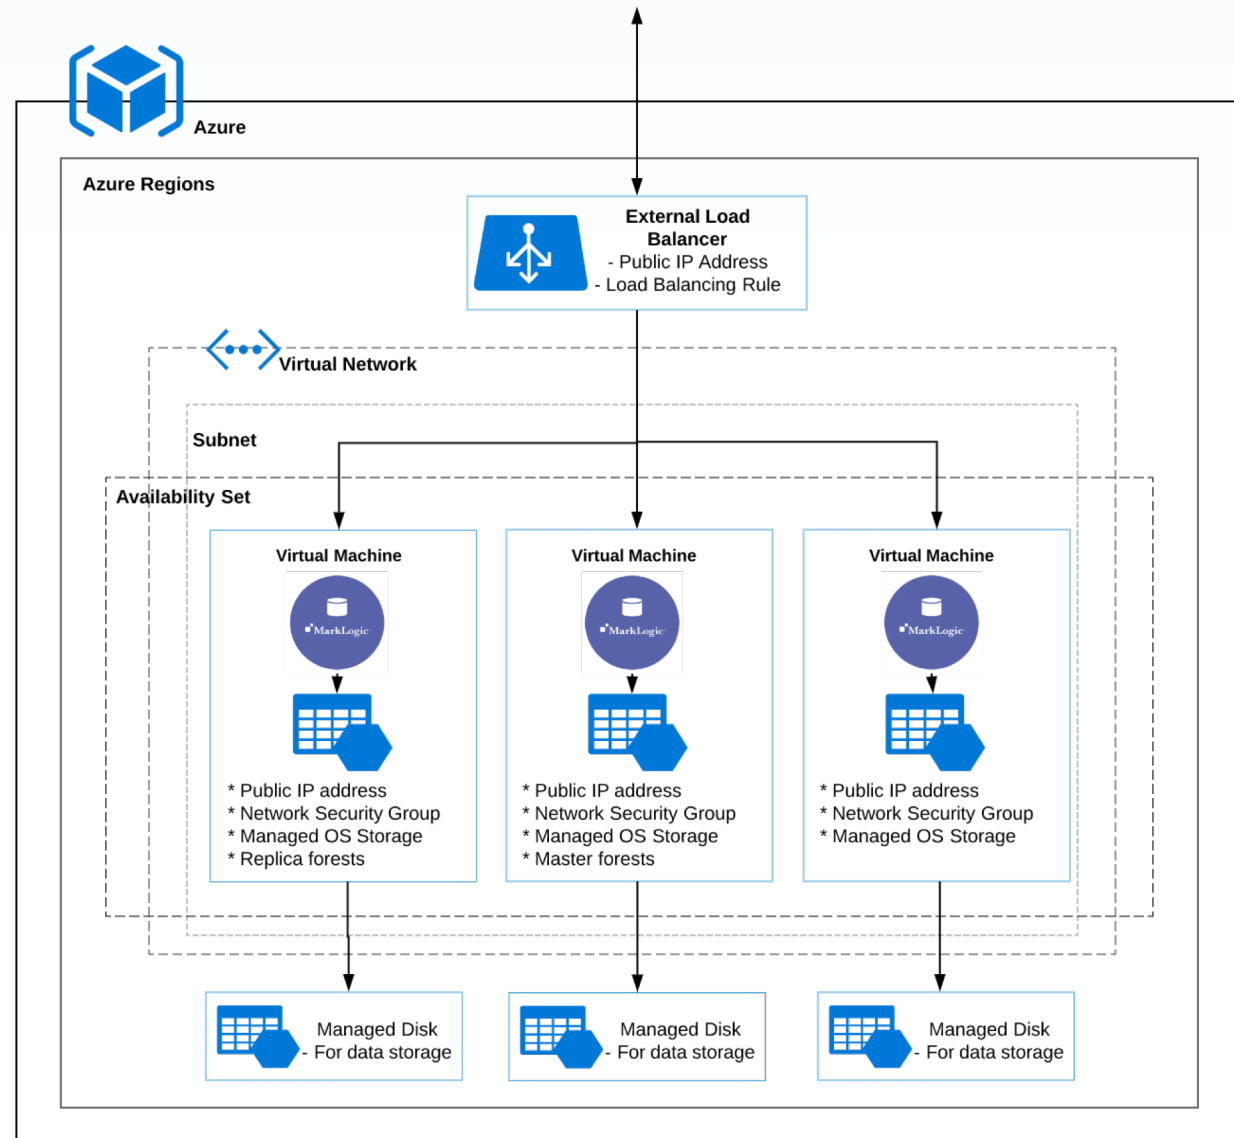

OS Image

Azure Linux
Virtual
Machine

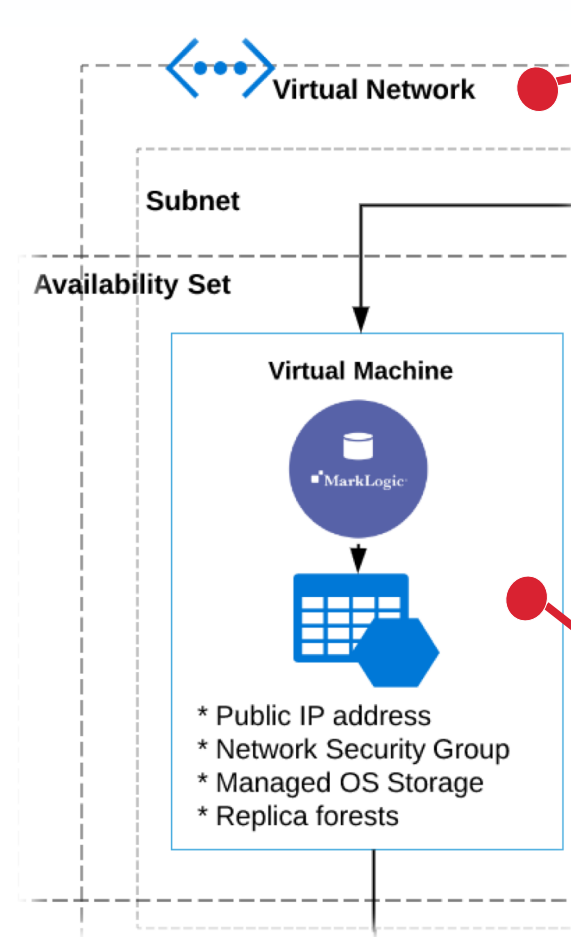

MARKLOGIC CLUSTER

Reference Architecture Diagram

MarkLogic Cluster on Azure

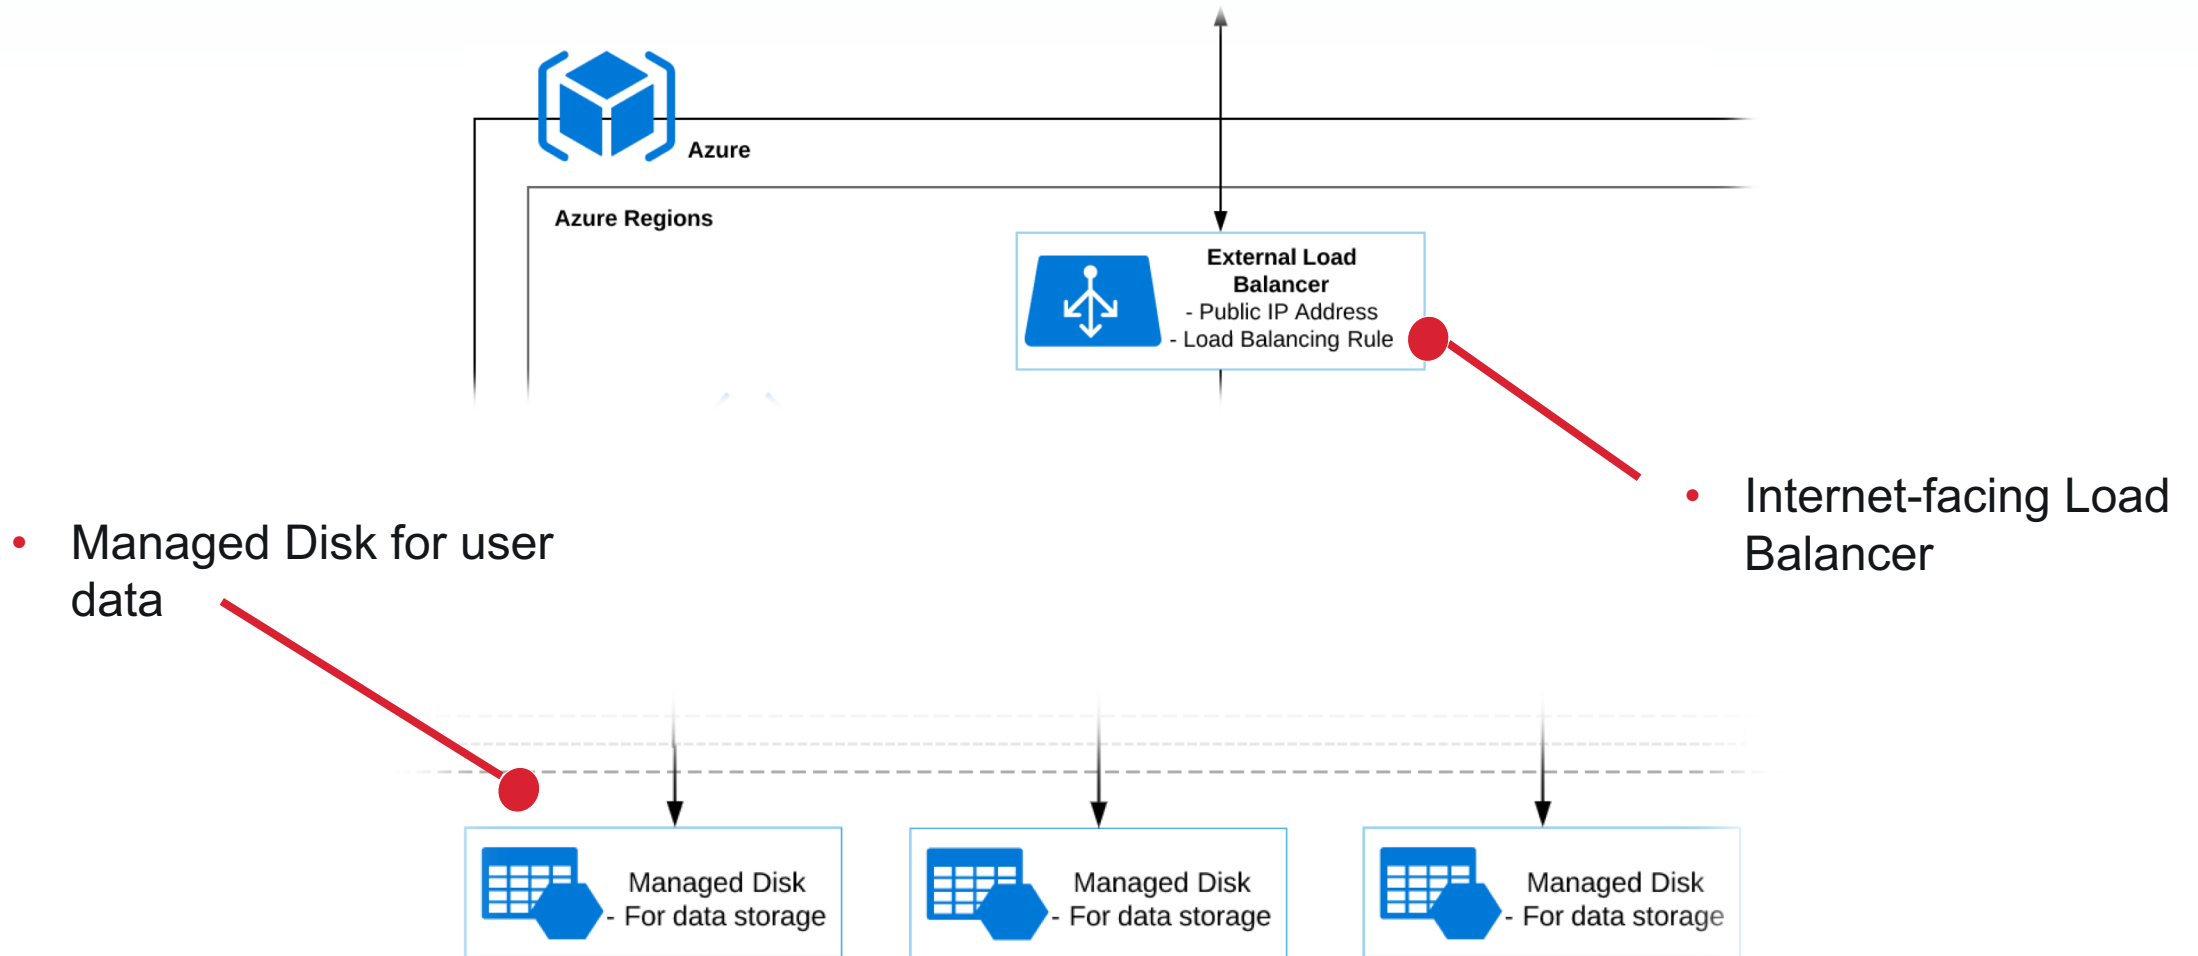

- Nodes are placed in Azure Availability Set.

- The cluster is completely in Virtual Network

- Linux VM running MarkLogic Image
- Managed OS Disk
- Public IP Addresses
- Network Security Group

Lab time estimate:
■ 15 minutes

Unit 1 Exercise – Deploy Cluster

- Use Solution Template.
 - Customize cluster settings.
 - Wait for the cluster to come online.
 - Check the status of running cluster.
- **DO**
 - Note the resources deployed with the cluster.
 - Check the nodes are forming a functional cluster.

Unit 1 Optional Exercise

- Deploy a single node cluster using same steps.
- **DO**
 - Notice the difference of cluster configurations when setting up
 - Check the single node cluster running status

MARKLOGIC CLUSTER

Unit 1 QUIZ

- How do you scale up the cluster?
- What happens to your data if one node goes down?

Questions?

Unit 1 – Deployment of a Cluster
